GET STARTED IN PHP THE RIGHT WAY

Many entry level PHP developers want a quick path to glory, a shortcut to knowing PHP. Too many books and tutorials jump straight into a ready-made environment that just wants you to code, with no regard for security, version control, or other absolutely essential practices. This book is aimed at the absolute beginner who wants to start learning PHP; it will set you up with a thorough understanding of what makes for a good, modern, adaptable PHP environment before you start diving into PHP itself.

This book will cover a the building blocks of a good PHP environment, including covering essential topics such as:

- The anatomy of a web request
- The importance of a good IDE
- Using Composer for package management
- Version control with Git and GitHub
- Deployment and hosting options
- Using virtual machines
- Build a sample app from scratch and deploy it -- the right way
- And much more!

And much more...

SITEPOINT BOOKS

- ✓ Advocate **best practice** techniques
- ✓ Lead you through **practical** examples
- ✓ Provide **working code** for your website
- ✓ Make learning **easy** and **fun**

YOUR AUTHORS

BRUNO SKVORC

Bruno, a web developer from Croatia, is SitePoint's senior PHP editor by day, and a developer evangelist for Diffbot.com by night. A big fan of working on treadmill desks, he spends the most of his days walking through various projects and problems, and then exposing them on SitePoint.com. In his free time (i.e. when his beagle is asleep) he swims, #stronglifts, plays (board) games and paints miniatures.
